

Requirement ID / Description	F1. Offline Scheduling Module	F2. Reminder System (SMS/IVR)	F3. Biosimilar Consent & Eligibility	F4. Store-and-Forward Review Module	F5. Adherence Tracking System	F6. Symptom Reporting & Escalation	F7. Offline Data Sync Engine	F8. Analytics Dashboard
R1. System must support offline infusion scheduling.	SA						CC	
R2. System must send automated reminders via SMS/IVR.		BB						
R3. System must support biosimilar switching (eligibility, consent, verification).			CC				CC	
R4. Doctors must be able to review intake info asynchronously.				SC				
R5. Clinic admin must track adherence & no-shows.					DG			
R6. CHWs must receive escalation alerts for						SA		

adverse
reactions.

R7. System SA
must support
reliable
offline data
synchronizati
on.

CC

R8. Program
managers
must view
outcomes,
cost savings,
& event
metrics.

BB

Team Members (Initials)

- SA – Simon Armstrong (Scrum Leader & Primary POC)
- CC – Cameron Carter (Technical Lead)
- BB – Basanta Baral (Backend Developer)
- SC – Sollomon Crowder (Frontend Engineer)
- DG – Destin Gilbert (Frontend Engineer)

From this matrix, you can observe that:

- The Offline Scheduling Module (F1) supports multiple requirements by enabling CHWs and clinics to manage scheduling even without internet connectivity, addressing both R1 and contributing to data synchronization (R7).
- The Reminder System (F2) directly supports patient engagement by sending automated reminders, fulfilling requirement R2 regarding continuity of care.
- The Biosimilar Consent & Eligibility Module (F3) addresses several aspects of biosimilar switching (R3), including intake, consent capture, and safety verification. This feature also relies

on the data sync engine (F7) to ensure functionality offline.

- The Store-and-Forward Review Module (F4) allows clinicians to asynchronously review patient intake information, supporting requirement R4.
- The Adherence Tracking System (F5) supports R5 by enabling clinics to monitor attendance, detect missed visits, and support persistence with treatment.
- The Symptom Reporting & Escalation Module (F6) enables CHWs to receive and respond to adverse event alerts (R6), supporting patient safety.
- The Offline Data Sync Engine (F7) maps to multiple requirements by ensuring all modules function reliably in low-connectivity environments.
- The Analytics Dashboard (F8) supports requirement R8, enabling program managers to visualize outcomes, cost savings, and safety data.

This structured mapping demonstrates how our system's features comprehensively meet the project's functional and safety-critical requirements.
